

**UNIVERSITY OF ZIMBABWE**

**FACULTY F AGRICULTURE**

The undersigned certify that they have read, and recommended to the Department of Crop Science for acceptance, the thesis entitled:

**Selection for high grain yield and determination of heritable variation in biomass yield, grain yield and harvest index in different plant height classes of breeding populations of spring wheat (*Triticum Aestivum* L.)**

Submitted by **EPHRAME KUDZAI SHE HAVAZVIDI** in partial fulfilment of the requirements of the degree of Doctor of Philosophy in Crop Science.

**Approved**

|--------------------------------------------------------------------------------------------------------------|-------|
| LIST OF TABLES.....                                                                                          | xiii  |
| LIST OF APPENDIX TABLES.....                                                                                 | xvii  |
| LIST OF FIGURES.....                                                                                         | xviii |
| 1. INTRODUCTION.....                                                                                         | 1     |
| 2. LITERATURE REVIEW .....                                                                                   | 6     |
| 2.1 Selection criteria.....                                                                                  | 6     |
| 2.1.1 Association between auxiliary traits and field crop grain yield<br>including their heritabilities..... | 6     |
| 2.1.2 Association between auxilliary traits.....                                                             | 11    |
| 2.1.3. Stability across environments.....                                                                    | 15    |
| 2.2 Genetic parameters.....                                                                                  | 16    |
| 2.2.1 Hereditary Variance and its estimation .....                                                           | 17    |
| 2.2.2 Definition and estimation of Heritability.....                                                         | 21    |
| 2.2.3 Correlation of characters.....                                                                         | 30    |
| 2.2.4 Response to selection and its prediction.....                                                          | 34    |
| 2.2.5 Relative selection efficiency and the value of indirect selection.....                                 | 36    |
| 2.3 Inheritance Studies.....                                                                                 | 38    |
| 2.3.1 Detection of type of gene action.....                                                                  | 41    |
| 2.3.2 Estimate of gene effects using generation means.....                                                   | 42    |
| 2.3.3 The nature and estimation of heterosis.....                                                            | 45    |
| 3. MATERIALS AND METHODS.....                                                                                | 47    |
| 3.1 Experimental sites and management of trials.....                                                         | 47    |
| 3.2 Evaluation of Selection Criteria.....                                                                    | 48    |

|         |                                                                                                                                                              |    |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| 3.2.1   | Spring wheat crosses used in the selection and their constituent<br>parents.....                                                                             | 49 |
| 3.2.2   | Sampling and selection procedure.....                                                                                                                        | 50 |
| 3.2.3   | Evaluation of responding trait, grain yield and the auxiliary traits;<br>biomass, earmass, harvest index, and plant height of single-ear<br>progenies.....   | 53 |
| 3.2.3.1 | Experiment 1: Evaluation of grain yield and estimation of<br>it's heritability.....                                                                          | 53 |
| 3.2.3.2 | Statistical analysis of grain yield data from experiment1.....                                                                                               | 55 |
| 3.2.3.3 | Experiment 2 : Evaluation of single-ear progeny traits;<br>biomass, earmass, HI and plant height.....                                                        | 61 |
| 3.2.4   | Associations between grain yield means in Experiment 1 and single-<br>ear progeny traits measured in the accessions during the previous<br>winter, 1993..... | 62 |
| 3.2.5   | Associations among single-ear progeny traits, biomass, earmass, HI<br>and plant height.....                                                                  | 63 |
| 3.2.6   | Relative Selection Efficiency (RSE) of single-ear progeny traits;<br>biomass, earmass and HI in the indirect selection for grain yield.....                  | 63 |
| 3.3     | INHERITANCE STUDIES: Experiment 3.....                                                                                                                       | 64 |
| 3.3.1   | Mating design and field experiments.....                                                                                                                     | 64 |
| 3.3.2   | Estimation of gene effects using generation means.....                                                                                                       | 65 |
| 3.3.3   | Estimation of heterosis.....                                                                                                                                 | 66 |
| 3.3.4   | Estimation of heritabilities.....                                                                                                                            | 67 |
| 3.3.5   | Association of single plant characters.....                                                                                                                  | 68 |
| 4.      | RESULTS.....                                                                                                                                                 | 69 |

|       |                                                                                                                                           |    |
